

VISUALISASI DATA

UNIVERSITAS KRISTEN KRIDA WACANA

WHAT IS DATA

Data is a set of fact that can give information about an event

THE IMPORTANCE OF DATA

- **Information**
- **Evaluation of some issues**
- **Basic Truth / Justification**

KIND OF DATA

Qualitative (Categorical) – Ordinal, categorical

Characteristics and descriptors that can't be easily measured but can be observed subjectively. i.e : Gender, Color, Names, Smell.

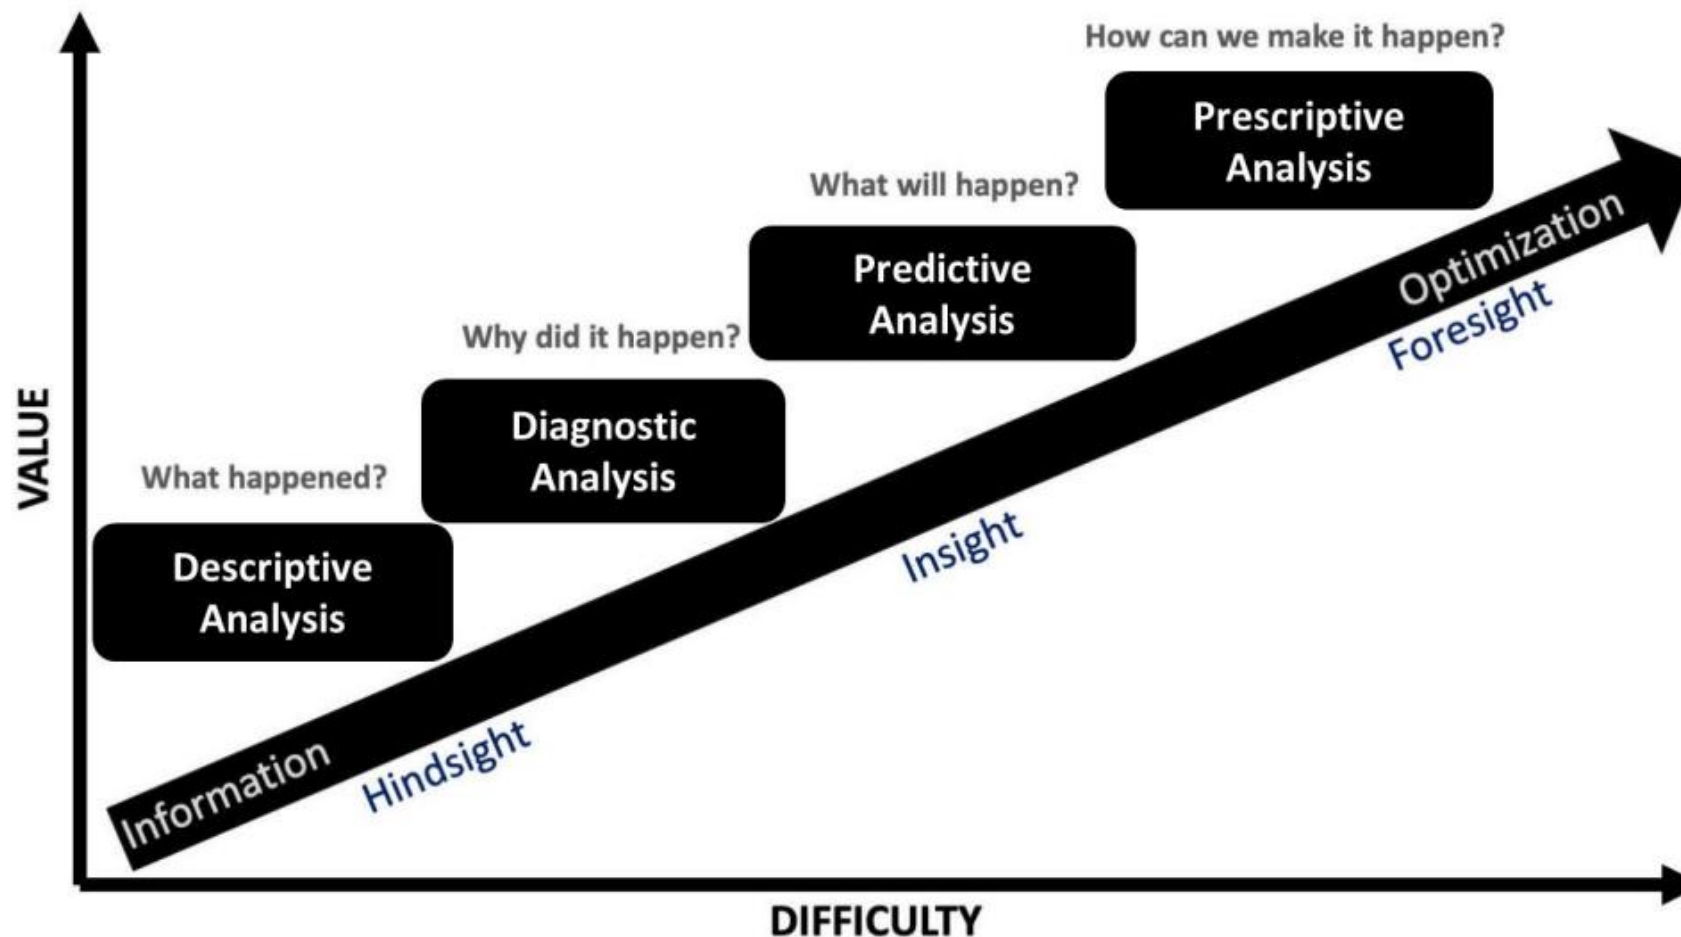

Quantitative (Numeric) – Discrete, continuous

Numbers and things you can measure objectively (0,1,2,3....). i.e : Height, Number of students in class, Temperature, Area, Volume.

WHAT IS DATA ANALYSIS

Data Analysis is a process **gathering, cleansing, modeling / analyze,** and **visualize** the data to get bunch of insight for better decision making.

WHAT IS DATA ANALYSIS

WHAT IS DATA VISUALIZATION

The representation of data to communicates information through graph

THE IMPORTANCE OF DATA VISUALIZATION

385930254732764583220263645957264

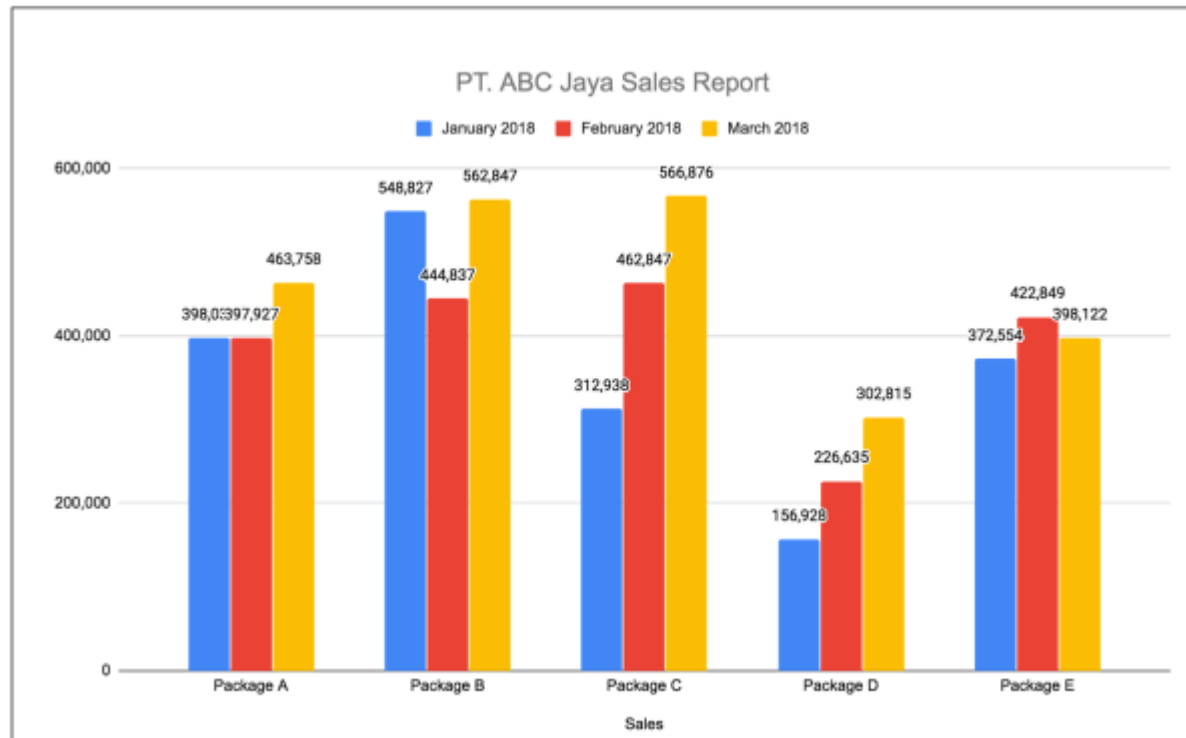

Can you spot how many “0” in this picture ?

THE IMPORTANCE OF DATA VISUALIZATION

Sales	January 2018	February 2018	March 2018
Package A	398,036	397,927	463,758
Package B	548,827	444,837	562,847
Package C	312,938	462,847	566,876
Package D	156,928	226,635	302,815
Package E	372,554	422,849	398,122

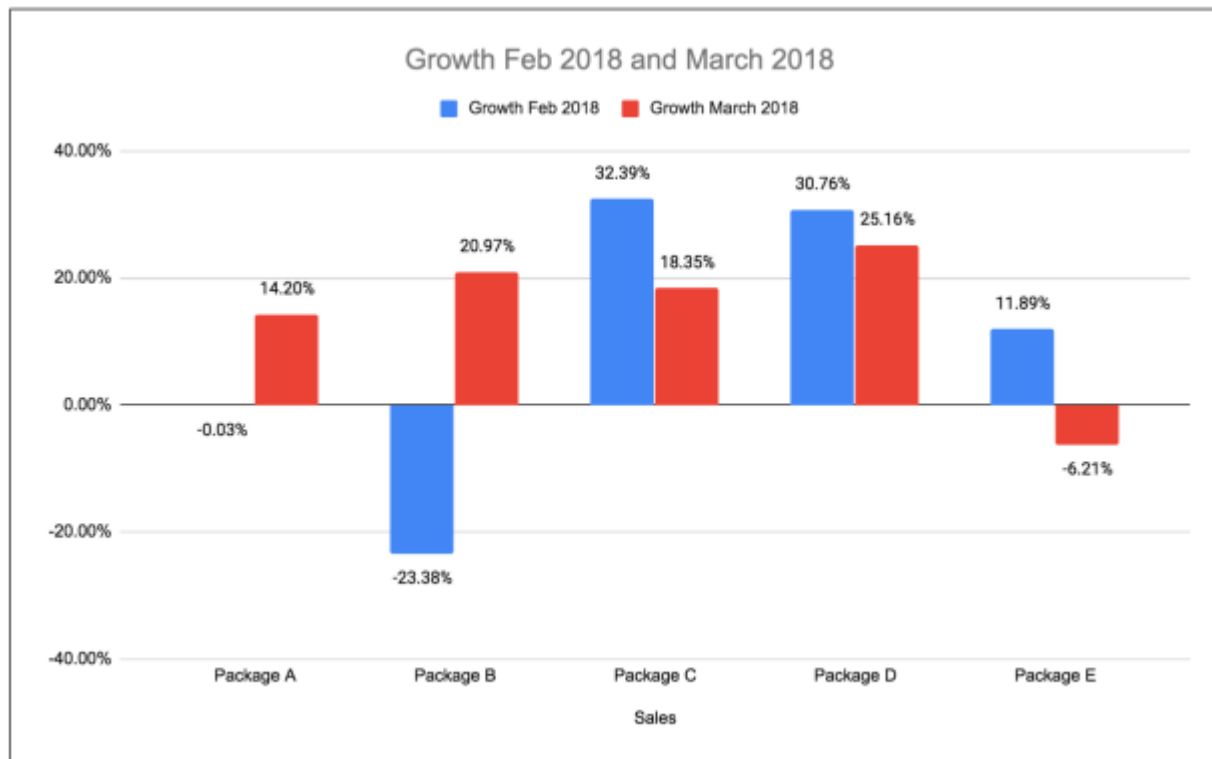

Do you know which package has highest sales on Feb 2018?
Can you answer in 5 seconds?

THE IMPORTANCE OF DATA VISUALIZATION

- Do you know which package has highest sales on Feb 2018 ?
- How fast can you find the answer?

THE IMPORTANCE OF DATA VISUALIZATION

Which package has low growth on February 2018 ?

THE IMPORTANCE OF DATA VISUALIZATION

Data Visualization is important because a visual summary of information makes it easier for the human brain to understand and identify patterns and trends, than looking through hundred of rows data on a sheet.

THE IMPORTANCE OF DATA VISUALIZATION

Two kind of Visualization, INFOGRAFIS and DASHBOARD

TYPES OF VISUALIZATION / CHART

Line charts, or line graphs, are powerful visual tools that illustrate **trends** in data **over a period of time**. For example, one axis of the graph might represent a variable value, while the other axis often displays a timeline.

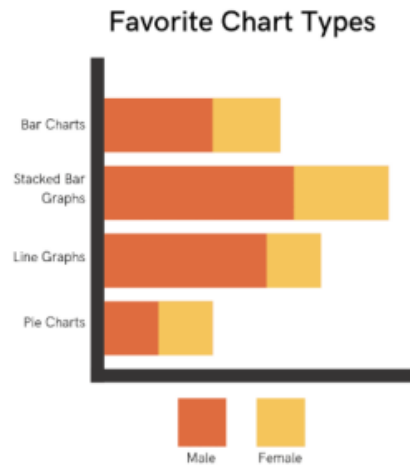

The simplest and most straightforward way to **compare various categories** is the classic bar graph. One axis of a bar graph features the categories being compared, while the other axis represents the value of each.

Pie charts are the simplest and most efficient visual tool for **comparing parts of a whole**. For example, a pie chart can quickly and effectively compare various budget allocations, population segments or market-research question responses.

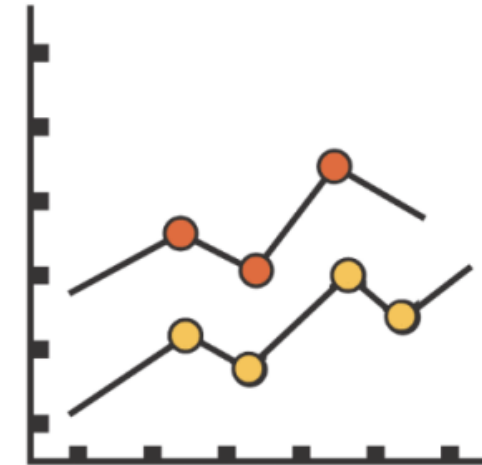

TYPES OF VISUALIZATION / CHART

Stacked Bar, The “stacked” layout **represents this chart’s contrasting color scheme**. These colors map back to a legend that accompanies your map.

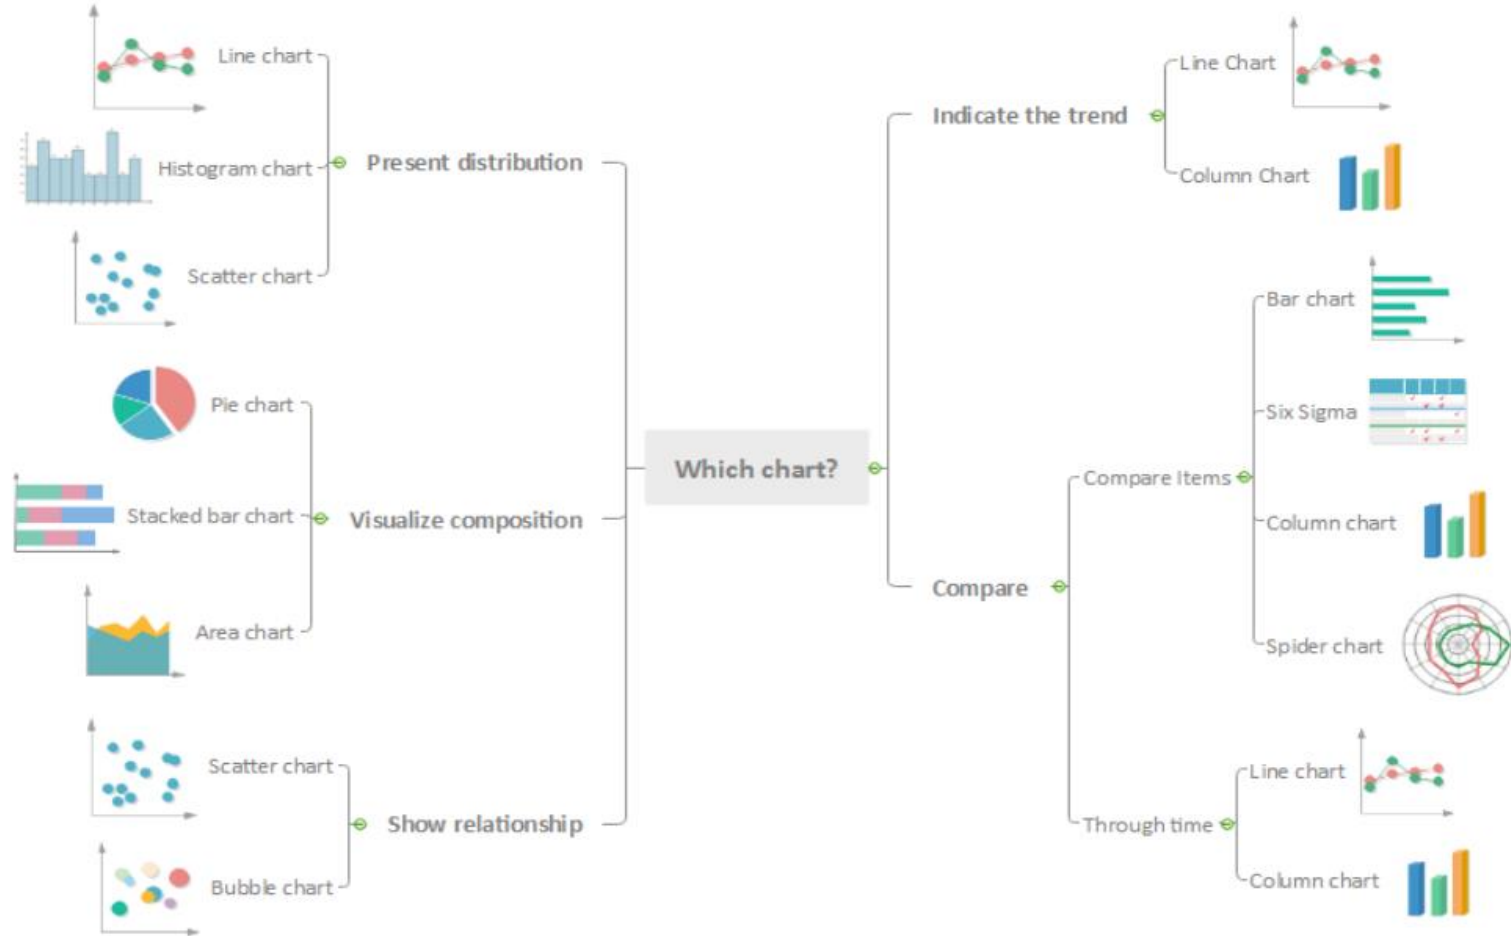

Dual-Axis Chart, This layout allows you to show a relationship between different variables. i.e : Transaction and Growth.

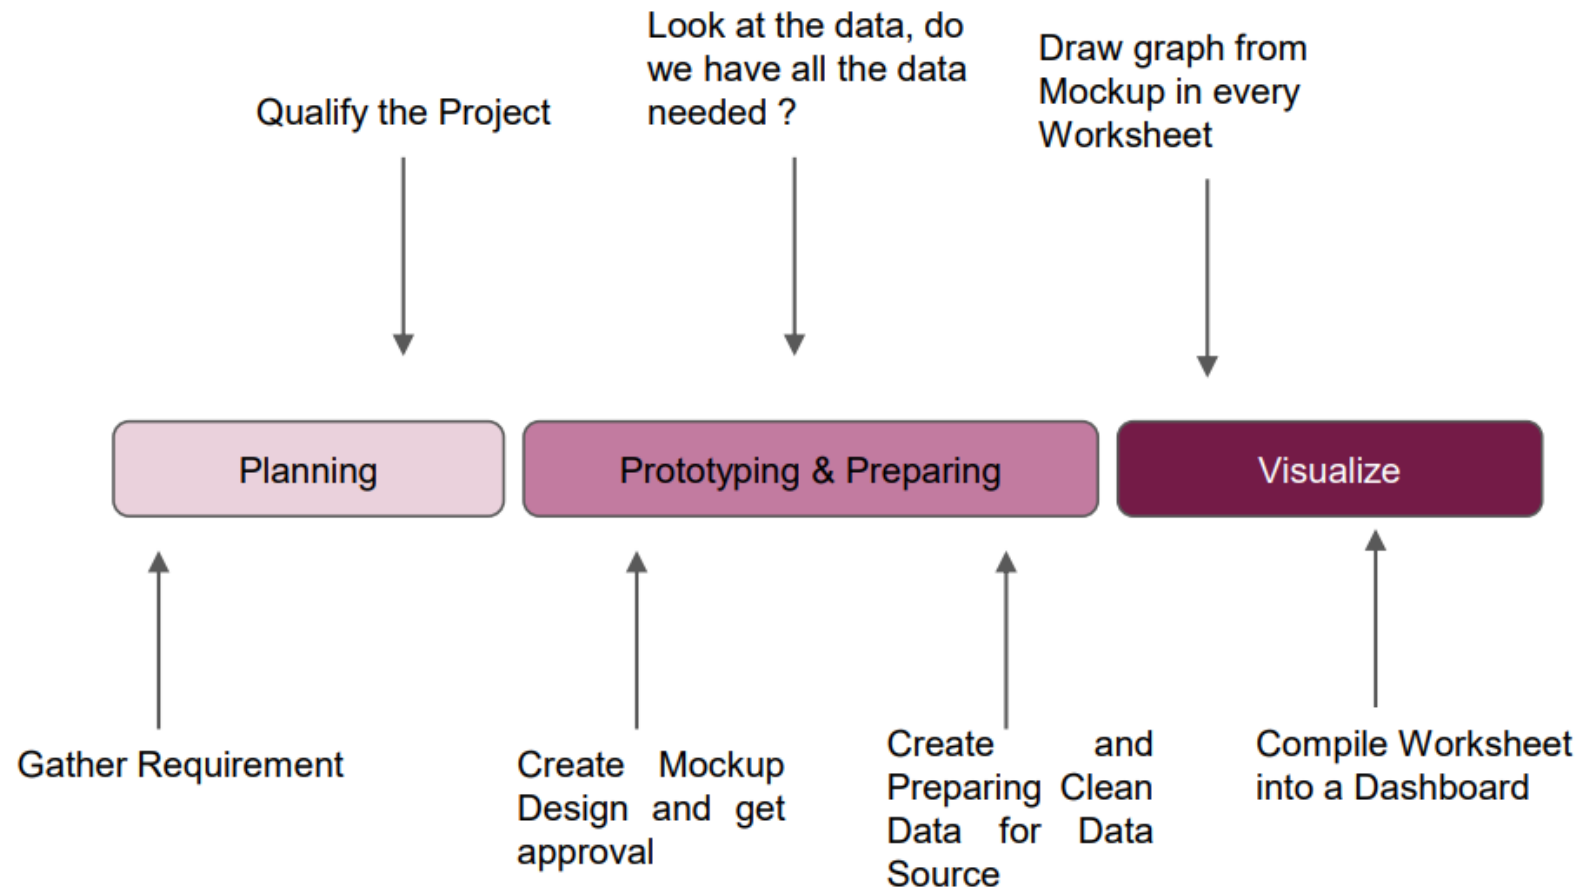

Scatter Plots, it represents different variables plotted along two axes.

TYPES OF VISUALIZATION / CHART

DASHBOARDING FLOW

FALLACY: CHERRY PICKING

Avoid only focusing on data that supports your hypothesis while ignoring data that contradicts it.

“There are three kinds of lies: lies, damned lies, and statistics.”
Data should accurately reflect the entire reality.
